Pearson Edexcel GCE In A level Further Mathematics
Paper 9FM0/3B

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

EDEXCEL GCE MATHEMATICS

General Instructions for Marking

1. The total number of marks for the paper is 75.

2. The Edexcel Mathematics mark schemes use the following types of marks:

   - **M** marks: method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
   - **A** marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
   - **B** marks are unconditional accuracy marks (independent of M marks)
   - Marks should not be subdivided.

3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

   - bod – benefit of doubt
   - ft – follow through
   - the symbol $\sqrt{}$ will be used for correct ft
   - cao – correct answer only
   - cso - correct solution only. There must be no errors in this part of the question to obtain this mark
   - isw – ignore subsequent working
   - awrt – answers which round to
   - SC: special case
   - oe – or equivalent (and appropriate)
   - dep – dependent
   - indep – independent
   - dp decimal places
   - sf significant figures
   - ✱ The answer is printed on the paper
   - ⌐ The second mark is dependent on gaining the first mark

4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.

	$= \dfrac{5}{9}$	A1	1.1b
		(3)	
		(9 marks)	

	Notes
(a)	**M1:** Selecting geometric distribution with $p = 0.2$ and attempting required probability. Allow $(0.8)^n(0.2)$ to imply M1 with $n = 6$ or $n = 3$ **A1:** awrt 0.0524 Allow exact fraction $\dfrac{4096}{78125}$
(b)	**M1:** $P(X \geq 6)$ may be implied by $(1 - p)^5$ or $1 - (p + pq + pq^2 + pq^3 + pq^4)$ **A1:** awrt 0.328 Allow exact fraction $\dfrac{1024}{3125}$
(c)	**B1:** Mean $= 5$ **B1:** Standard deviation $= \sqrt{20}$ o.e. or awrt 4.47
(d)	**M1:** Determining the probability that Suzanne wins with at least three terms seen (may be implied by 2nd M1) **M1:** Recognising need to sum terms of an infinite geometric series with correct $r = 0.8^2$ (with numerator less than denominator) **A1:** $\dfrac{5}{9}$ (allow awrt 0.556)

Notes

(a)
M1: Attempt at $\mathrm{E}(X)$ with at least 3 correct products seen

M1: Attempt at $\mathrm{E}(X^2)$ with at least 3 correct products seen

A1: 9 cao

Alternative
M1: Attempt at $\mathrm{E}(X)$ with at least 3 correct products seen

M1: Attempt at expression for
$\mathrm{E}((X-\mu)^2)=(-5-2)^2\times\frac{1}{12}+(-2-2)^2\times\frac{1}{6}+(3-2)^2\times\frac{1}{4}+(4-2)^2\times\frac{1}{2}$
with at least 3 correct terms
A1: 9 cao

(b)
M1: Finding distribution of Y
M1: $\mathrm{P}(X=-2)+\mathrm{P}(X=3)$ or $\mathrm{P}(Y=4)+\mathrm{P}(Y=7)$
A1: $\frac{5}{12}$ (condone awrt 0.417)

(c)
M1: Attempt at $\mathrm{E}(XY)$ with at least 2 correct terms
A1: 13.5

	Critical value $\chi^2_{(1,0.10)} = 2.705$ or 2.706	B1ft	1.1b
	Test statistic is not in the critical region, insufficient evidence to reject H_0 $(2.689 < 2.705/6)$ Data are consistent with binomial/engineer's/suggested model.	B1ft	3.5a
		(8)	
(c)	The total amount/proportion of defective pins remains the same.	M1	2.4
	The cells for $X \geq 2$ are still combined in the test.	M1	1.1b
	So there is no change to the value of the test statistic.	A1	2.2a
		(3)	
		(13 marks)	

	Notes
(a)	**M1:** Correct expression for p (may be seen in stages). Allow $\frac{36}{240}$ but not $\frac{6}{40}$ on its own **A1*cso:** $p = 0.15$ stated and no incorrect working seen
(b)	**M1:** Attempting to find expected frequencies, at least 2 correct trunc. or rounded 1dp **M1:** Recognising need to combine cells (Sight of awrt 8.94 implies M1M1) **A1:** Combining cells for $X \geq 2$ (to make 3 cells) **B1:** Justifying why 2 is subtracted with p being calculated from data **A1:** 1 degree of freedom **B1:** Correct hypotheses (0.15 must **not** be included) Allow engineer's model. **B1ft:** Correct critical value (ft their df) May see $\chi^2_{(2,0.10)} = 4.605$ or $\chi^2_{(3,0.10)} = 6.251$ **B1ft:** Correct inference (ft comparison of their CV with 2.689). Condone $p = 0.15$ included here. Do not allow contradictory statements to score here. Hypotheses must be correct way round.
(c)	**M1**: Determining the number (N=36)/proportion (p=0.15) of defective pins has not changed. e.g. $11 + 12 + 9 + 4 = 36$. But not $7 + 2 + 1 = 6 + 3 + 1$ **M1**: Understanding the cells for $X \geq 2$ are still combined in the test **A1**: (dep on both M1s) Concluding that there is no change to the value of the test statistic.
